<b>Highest Education</b>	Bachelor's degree
<b>Personal Statement</b>	<p>Hi, everyone! I am an MSc Student, Department of Geography &amp; Environmental Studies, Faculty of Biological Sciences, University of Chittagong. In 2019, graduated Department of Geography &amp; Environmental Studies, University of Chittagong. As an MSc Student, I recently had to apply for thesis, and I would like to work with land-cover changes using "Multi-temporal Satellite Imagery".</p>
<b>Paper/Presentation Title (Unpublished Research or Review or Field Work)</b>	<i>Vulnerability and Exposure to Landslide in Chittagong Hill Tract Bangladesh: A Study of Rangamati Sadar for Building Resilience</i>
<b>Keywords</b>	Landslide; Heavy rainfall; Chittagong Hill Tracts; Causes and Impacts Analysis
<b>Abstract (100-300 words)</b>	<p>Man is social being. So, he makes his settlement for his own ways. Most of the vulnerable peoples of Bangladesh have been living in the Chittagong Hill Tracts especially in Rangamati district since a long time ago. The study aimed to determine the main causes of failure of slope or landslides and to suggest the lives and livelihood of local people. The study "Assessing the ecological declining and environmental degradation situation of hilly area" of people</p>

	living in the Rangamati. Information on landslide and slope failure were collected from newspapers, available internet sources and technical research report. On the basis of information, eight major causes are taken which is physical and man-made. The results of analysis and discussion revealed that the major causes of landslides were due to illegal cutting slope by public for the purpose of cultivating and growing up settlement.
